

CAN MONEY BUY HAPPINESS? – ARTICLE

Money can partially buy happiness. You will be able to realize this in the upcoming speech.

One should always earn money by legal means which, will stay with us for longer. As said in our Sanskrit sacred scripts, we should obtain money by legitimate means so that Dhana Lakshmi is always with us.

You might have at least once seen serials. In that, most people are rich, if I am not wrong. Many people grow hatred between each other only because of money. People appreciate the rich and disrespect the poor. The rich people are always respected no matter how bad they are.

Superstitions, this word is most common among the Hindus. For example, if you touch your books with your foot, you won't gain studies well. Well, there are a few superstitions for money also! Let's discuss a few of them.

"To invest person needs to be rich" - This isn't true because any person can invest. People can invest a small amount as rupees 500. Investing money in the stock market can be proved risky.

"Money can't buy happiness" - Well, that's our topic! Money couldn't buy happiness earlier, but in terms of now, it does! Remember you ask your parents to purchase something so that you feel happy? And if they don't buy it for you, get upset. Similarly, it is the case in many of our families, mine too! This case proves that money at times buys happiness too.

All these myths are believable, and most of them are real sometimes.

Money spent on buying jewelry or a house is a good investment because it secures the future life. Buying jewelry is a good option because sometimes it helps us to rectify financial issues.

Let me ask you a question if you win a lottery for 100 thousand, what will your parents do? In a majority, they will save it for the future. Thus, saving is a principle of life.

Therefore, money can bring us everything but, money is not everything. Money is something that which should be used wisely for the betterment of society. We should indulge in saving money from a very young age.

On this note, I will be ending my speech with a quote, "Beware of little expenses. A small leak will sink a great ship" By Benjamin Franklin.

**MY ENVIRONMENTAL COLLECTION FOR INFORMATION – USED ONLY FOR
SOCIAL AWARENESS**

Climate

- Last ice age lived for 30 years
- The last ice age died 30 Million years ago
- Fossil Fuels are made up of
- Neatly and tightly packed carbon - Diamond
- Not neatly & tightly packed carbon - Fossil Fuels
- Effects of Global Warming
 - o Irregular weather patterns
 - o Ice melts
 - o Ozone damage
- Coral reefs
- Wild Karnataka Movie
- How can I help?
 - o Save water
 - o Save electricity
 - o No to plastic. If use is necessary throw it in a dustbin
 - o Use fewer fossil fuels
 - o Shop fewer clothes.

Resource Management

- Leachate – When rainwater percolates through the landfill waste, it forms black colored poisonous liquid
- **Why is there so much waste?**
 - Population increasing
- **Linear Economy**
 - Resources > Make > Use > Dispose > Waste
- **Circular Economy**
 - Resources – Make – Use – Waste Management (Segregation) – (Again Repeated)
- **Types of Household Waste**
 - Organic/ Wet Waste
 - Biodegradable
 - Green Waste
 - Food Waste
 - Recyclable / Dry waste
 - Non – Biodegradable
 - Recyclable
 - Paper, plastic, glass, metal, electronic
 - Reject Waste
 - Non-biodegradable
 - Non – recyclable
 - Body waste, medical, broken glass
- **The 6Rs Principle and the ways for opting it**
 - Reduce – Minimise the use of unwanted things
 - For example – Chips. Buy chip packets that are made up of paper. The benefit is:-
 - Firstly they are eco-friendly. Thus, won't harm the environment
 - Repair – Fix the issues in a thing that can be used for more time
 - You can repair shoes or other things when they are broken instead of throwing them.
 - Recycle - convert (waste) into reusable material.
 - Collect your reusable dry waste
 - Think of various ways you can reuse it
 - For Example – A plastic bottle can be used as a decor
 - Reuse – using something until it is usable
 - Reuse plastic bottles for decors
 - Replace – put a new but eco-friendly product instead of any harmful one
 - Refuse – Say no to the things that are NOT eco-friendly
- **Journey of a Recycled Plastic Bottle**
 - Made in a factory
 - Used
 - Properly Disposed
 - Sent to a recycling center
 - Recycled material sent to be remade into useful things

Composting

- The cycle of Corn Regrowth through Composting
 - o Corn grows
 - o Corn is harvested
 - o Corn outer coverings
 - o Used for composting
 - o Soil formed due to composting is used for growing corn again.
 - Note - This is a repetitive process
- Ingredients Compost Making
 - o Browns, Greens, Microorganisms, Macroorganisms, Air, Water, Sun, Soil
- What goes and doesn't go into Composting?

<u>Greens (Nitrogen)</u>	<u>Browns (Carbon)</u>	<u>Prohibited Items</u>
Food Scraps, Corn Husks	Dry leaves, Crushed Eggshells	Meat, Bones
Vegetable Scraps	Shredded Straw, hay	Milk Products
Fruit Waste	Sawdust, Cereal Boxes	Oil/Cooked Food
Coffee Grounds	Woody Chips and Twigs	Pet Manures
Teabags/leaves	Shredded Newspaper	Weed Seeds
Fresh grass clippings	Nut Shells, Ashes from wood	Diseased/insect infected plants
Other Garden Waste (Plants/Stalks/Flowers)	Corn stalks and cobs, String/Cotton Thread	Glossy Paper, Plastic
Chicken/Livestock manure	Brown paper bags, Wool	Anything with harsh chemicals
Stale/Mouldy Bread	TP and paper towel rolls	Poultry

- Ideal Ratio for composting – GREENS: BROWNS = 2: 1
- If compost is too dry, ADD WATER
- If compost is too wet, ADD DRY LAVES
- Types of composting
 - o Bottle Composting
 - o Bin/Bucket Composting
 - o Pot Composting
 - o Pit Composting
- How to prepare the composter?
 - o Step 1: Dried Leaves at the bottom to absorb leachate (Black liquid from waste which is poisonous) from waste
 - o Step 2: Put kitchen waste and stir it daily
 - o Step 3: Apply Brown Material (sawdust, coco peat) if it is too wet
 - o Step 4: Place a paper cover at the top to avoid attracting flies
 - o Step 5: Let the composter be placed outdoor (balcony, beneath stairs, etc) with good air circulation
- How to recognise?
 - o Month 1 – Wet, can identify waste matters
 - o Month 2 – Bit dry, reduces volume, can identify very few waste matters

- Month 3 – Shrinks further in volume, cannot identify waste matters, looks like black soil
- NPK
 - Nitrogen (N)
 - Leaf and Stem Growth
 - Helps in photosynthesis
 - New Cells
 - Potassium (K)
 - Plant disease resistance
 - Develops flowers and fruits
 - Helps in uptake of water
 - Phosphorous (P)
 - Root Growth
 - Flavour and Colour
 - Helps in uptake of water

Growing Plants

- Hydroponics
 - Technique of growing plants in water
- What would my plants need to grow? Take care of the plant's needs
 - Sun and Water – Choose a spot with good sunlight and a close by water source
 - Air – Aerate the soil using a spade. Remove Stones, twigs, any non – biodegradables
 - Soil and Nutrients – Loamy soil is best. Fertilize the soil by adding compost
 - Soil Aeration
 - Shallow Roots (Compacted Soil) – Before Aeration
 - After air and water enter the compacted soil the roots grow deeper
- Where can I make my garden?
 - Decide a home for your plant
 - Soil bed
 - Grow bag
 - Pot (With holes in the bottom)
 - Plastic Bottle (With holes in the bottom)
 - Any household container (With holes in the bottom)

Plastic

- What are plastics?
 - Plastics are synthetic materials
 - Plastics do not occur naturally like wood or iron
 - Plastics are created in laboratories by scientists
 - Plastics are a combination of elements.
 - Plastics are also known as polymers
- How is plastic made?
 - It is made from oil, natural gas or wood. Special things called hydrogen and carbon atoms are taken from them.
- Plastic Pollution
 - Accumulation of plastic objects and particles
 - Adversely affects wildlife, wildlife habitats and humans
- Microplastics
 - Microplastics are small plastics pieces less than 5 millimetres long which can be harmful to our ocean and aquatic life.
- What causes Pollution
 - Over Consumption
 - Incorrect Disposal
- Effects of Plastics
 - On environment
 - On Animals
 - On Humans
- Solution – The 6Rs
 - Refuse
 - Reduce
 - Reuse
 - Recycle
 - Repair
 - Replace
- Grades of Plastic
 - WIDELY RECYCLED
 - PET (Polyethylene Terephthalate) Clear plastic bottles.
 - Examples - fizzy pop bottles, mouthwash and water bottles, clear plastic jars. some yoghurt pots
 - NOT RECYCLABLE
 - PVC (Polyvinyl Chloride)
 - Example - Plastic films, plastic pipes, lawn chairs. children's toys, electrical insulators table protectors, hoses
 - RECYCLABLE - CHECK
 - HDPE (High Density Polyethylene) Stiff plastic often coloured.
 - Example - milk jugs, bleach or detergent bottles. Shampoo bottles, margarine tubs, bottle caps
 - RECYCLABLE - CHECK
 - LDPE (Low Density Polyethylene) Hard flexible plastic
 - Examples – bread bags, frozen food bags, squeezable bottles i.e., hand cream bottles
 - RECYCLABLE - CHECK

- PP (Polypropylene)
- Examples - packing tape, take away tubs, ketchup bottles, straws (carrier bags these are mainly recycled at supermarkets)
- NOT RECYCLABLE
 - PS (Polystyrene)
 - Examples - foamy takeaway packaging, disposable cutlery, some meat trays, packing peanuts, some yoghurt pots. Styrofoam
- NOT RECYCLABLE
 - Polycarbonate (which contains BPA)
 - This categorises all other plastics including bioplastics composite plastics like crisp wrappers and plastic coated wrapping paper.

Water Conservation

- Uses of Water
 - Irrigation
 - Feeding
 - Cleaning
 - Harvesting
 - Processing
 - Transportation
 - Washing
 - Cooking
 - Mixing
 - And So On...
- Virtual Water
 - Hidden Water usage we cannot see on a daily basis
 - Consider an Burger. To make a burger you need 2400 Litres of Water!
 - Cow → Farm → Cheese or Meat
 - Farm → Fruits and veggies → Patty
 - Wheat → Mill → Bread
 - Similarly A T- Shirt uses 2550 Litres, A Car uses 4,00,000 Litres of water and A Smartphone uses 12,000 litres of Water
- Water Based on Colour
 - Blue Water – Present on surface or in groundwater reservoirs
 - Green Water – Consumed in production of agricultural products
 - Grey Water – Treatable water coming out of laundry, bathing, dishwashing
 - Black Water – Harmful water full of germs and bacteria flushed down our toilets
- Water Efficient Home System to prevent water wastage
 - cistern storage for rainwater
 - Ultra Low Flush Toilet
 - Water wise gardening with drought resistant plants
 - Drip irrigation in Gardens
 - Water meter measures use and encourages conservation
 - Water Backflow Preventer
 - Use household rain water use
 - Water efficient shower heads
 - Water efficient appliances
 - Rain barrel storage for garden
 - Roof Catchment
- How do Plants Help?
 - Re – oxygenate water body
 - Absorb harmful chemicals
 - Block Sunlight
 - Absorb dissolved heavy metals
 - Shelter for fishes and frogs
- Common Water Cleaner Plants
 - Water Hyacinth
 - Water Mint
 - Golden Canna
 - Water Lettuce

- Water Lily
- Taro

Textile Industry

- Textile Industry - Cotton farm > Yarn > Cloth > Dyeing > Stitching > Shirt > Stores
- Environmental problems that occurs due to our fashion?
 - o Water usage and pollution
 - For making 1 T-Shirt we need 2650 Litres of Water which can fill 22 bathtubs.
 - This water is enough water for 1 person to drink for 2 and half years.
 - o Air Pollution
 - o Textile Waste
 - o Micro waste and other hazards
 - o Fast fashion Impacts
- Fast Fashion – Buying a lot of clothing in order to match the trends.
- Impacts of Fast Fashion
 - o Consumption of clothes has increased utilization of it is decreased.
 - o Growth of clothing sales and decline in clothing utilisation since 2020.
 - o Average consumer bought 60% more clothing in 2014 than in 2000, but kept each garment half as long.
- Textile Waste
 - o Pre-consumer waste (78% recycled)
 - o Post-consumer waste (only 15% recycled)
- Harmful Effects of employees working in textile industries
 - o Lung Diseases
 - o Skin and Health Problems
- Solution to Fast Fashion
 - o Buy less
 - o Choose your clothes Well
 - o Make it last
 - o Think twice before throwing
 - o Reuse, recycle, donate, upcycle
 - o Swap clothes with your friends
- Natural Fibres - Cotton, Linen, Silk, Jute, Banana Fabric and Wool

Personal Care

- What is personal care?
 - o Grooming Oneself
- Types of Personal Care
 - o Skin Care
 - o Hair Care
 - o Dental Hygiene
 - o Make up
 - o Bath
 - o Periods Hygiene
- Why we need to shift to eco-friendlier personal care options
 - o Animal Testing – People test these products on animals first to see if there is no reaction
 - o Plastic Packaging
 - o Presence of Microplastics, sulphate and other toxins
 - o Encourages mining for mica and exotic elements
- Features of Eco – Friendlier personal care options
 - o Cruelty free and vegan
 - o Eco friendly packaging
 - o Made from plant produce
 - o Supports local and small businesses
- Bath Powder Recipe:-
 - o Ingredients for bath powder
 - Gram Flour 50gms
 - Turmeric Powder ½ spoon
 - Curd/ Milk/ Water
 - Dried crushed Orange Peel or Daliya (1/2 spoon)
 - o Recipe
 - Mix gram flour, turmeric powder an curd(curd can be replaced with milk or water also)
 - Add finely chopped dried orange peel or Daliya (1/2 spoon)
 - Massage all over face and body
 - Wash off with water
- Features
 - o By Chance if the powder goes in your mouth there is no problem
 - o It is safe, handy, useful and soothing
- Alternative to cleaners
 - o Ingredients
 - 1 part of jaggery (100gm)
 - Vegetable Waste (300gm)
 - Water (1000 ml)
 - Airtight Bottle (Should be able to contain water amount you have taken)
 - o Recipe
 - Day 1 : Mix all ingredients and pour in air tight bottle or a closed container
 - Till day 45 : Open bottle cap once daily to release generated gas
 - Till Day 90 : Keep the bottle tightly closed at a shaded place
 - Day 90 : Filter out the ready to use liquid Bio-Enzyme from the pulp
 - o Secrets

- Leave space in bottle for the gases to expand
- Don't use glass bottles they might break
- Use Starter Culture like yeast or pulp/liquid from the previous liquid you made
- Dilute while using
- Insecticide Recipe
 - Ingredients
 - 1 part of jaggery (100gm)
 - Chilli, Garlic Peels (300gm)
 - Water (1000 ml)
 - Airtight Bottle (Should be able to contain water amount you have taken)
 - Recipe
 - Day 1 : Mix all ingredients and pour in air tight bottle or a closed container
 - Till day 45 : Open bottle cap once daily to release generated gas
 - Till Day 90 : Keep the bottle tightly closed at a shaded place
 - Day 90 : Filter out the ready to use liquid Bio-Enzyme from the pulp

SEQUEL WRITING TO THE STORY “THE ELVES AND THE SHOEMAKER”
(SELECTED FOR BANGALORE SAHODAYA COMPETITION)

Part 2 : Where do the elves come from?

A few days later, on a cold day, the shoemaker begins to work on his boots. He wonders where the elves came from.

He walks back home. He checks the calendar and finds the day after to be Christmas! He runs and informs his singing wife. The wife is happy to hear and reminisces about the elves doing their work and thinks to offer a feast on the day of Christmas on the occasion of them getting rich by selling boots made by the elves.

She informs her husband and he is happy to hear it too. She tells him to invite some of their friends to the feast. She sews clothing for them. It makes her wonder if the elves will attend the festival at their home. Out of curiosity, she asks her husband. Her husband replies, "He wants to invite them too! But he doesn't know where they belong." the wife asks him, "If you have some leather, we can keep it on the table, and seeing the leather they will come back. And we will ask them to stay till Christmas ends." Her husband replies, "Good Idea! I will get some leather right now." He walks out to get leather.

In the shop, he finds a suitable piece of leather. He brings the leather segment home with him. He lays it on the table. They sit in 1 corner covered with the wish of them being there. All around, the elves are walking and jumping and settling down to work. Then the couple comes out, scaring the elves. The couple tries to speak to them. An elf nods his head and waves them a hi, and then the other does the same. They invite them for a Christmas feast at their home. They nod a yes. The couple gets happy.

They ask the elves what they would like to eat at the feast. The elf replies, "We will eat fruits! Different kinds of fruits." The couple laughs. She asks, "Do you both diet?" The elves laugh and walk out. The couple goes to bed.

It is Christmas. The wife gets everything ready. Time passes by, the elves have a feast and leave for their home. The man follows them, he finds a teenage boy talking to the elves.

He comes inside and tells, "Caught you!" The boy gets frightened and asks, "Who are you?" The man tells, "I am the one you have been helping through these elves. These elves used to come to me and help me make boots. Where is your family and how do you know these elves?" The boy replies, "I have no family. I am all alone. One day, all of a sudden I lost my parents in an accident. I kept crying and weeping. When these elves came to me and asked what had happened. I told them everything and they lived with me from then on. We all worked very hard to earn money. I used to sell goods. And they used to help me find goods. We used to stay in an orphanage. One fine day, while I was working on a project, these elves spilled ink on the project. Due to this, it got ruined badly. I got angry and told them they could do nothing good. The elves told me that they would prove to me that they could do anything. From then on they are going to your house and helping you out with your work."

The man replies back, "Oh, I feel sorry hearing the demise of your parents. Why don't you stay with us? I will feel good if you do so. " The boy says, "But!". The man interrupts and says "There is no but. Tell me a yes or a no. If it is a yes then I would be really grateful. Or

else I would feel bad." The boy replies, "Okay! But why do you seem so interested in keeping me with you?" The man tells, "I see my younger version in you."

They both walk to the man's home. The man tells, "He is an orphan. He will stay with us from now on." He narrates the whole incident to his wife. The wife is shocked on hearing, what had happened in a matter of minutes.

Gradually the boy adjusts with them. The boy is provided with everything. The boy feels that he got a family. The elves, the couple, and the boy live happily ever after.

POEM WRITING ON THE “MAGIC OF NATURE” (FOR KALANTAR ART COMPETITION)

The world is so small,
It all seems to be a ball.
The world has given its control Humans should never let it fall!

The human tries to chase my composition For their World Class Exhibition
How do I say that it is my reduction,
Tell me the reason behind your mission!

It is good to have a superposition
But how do I tell it is just an intuition!

Everything has a reason,
For an example of waste segregation.

See the controlling of the man for its earth It isn't worth
When you know I can't do restriction, Why do you do construction?

The work of mine is not alone, I need you to show my zone
My task is to inform, Your task is to perform
Changes happen with time So be a person of sublime

SHORT ESSAY – WHAT IS THE GREATEST GIFT YOU HAVE EVER RECEIVED?

Many of my presents are special to me. Gifts convey feelings to the receiver. The greatest gift I have ever received is my understanding, life, and brain.

Some presents fall apart after several uses. But the only gift I got lasted for 12 entire years and now running 13 and will last for years longer. Yes, you guessed it right, life! My parents made my life studious and organized. And out, of course, siblings come to the destruction! They made my life mischievous and naughty. My life came as a living package without emotions to earth while going out will become a package of memories and happiness.

I can understand real-life problems with ease. For rescue, I can give solutions too! People feel that they are not enough for themselves and search for a companion. Thinking only a friend is the person who can support you isn't right. The truth is that you and your family are the backbones of you.

My brain helps me control emotions, think of answers, problems solving, remember things, etc. My brain tells me to undo the mistakes of my past. My brain helps me think of words for writing essays too!

I am the best for myself. "Thinking I am good for nothing is a feeling of nothing."

THE WINDOW OF REEMA'S PAST STORY

Reema is a 20-year-old. Her mother gives her some clothes to clean. She checks the weather and tells "It is blazing hot today. It looks as though it is perfect for the clothes to dry." She brings the clothes outside and starts to place them on the rope.

Just then, a gush of wind rushes towards her. The wind, accompanied by Reema's favorite red dress, flies away up in the sky. Frustrated Reema, runs behind the waft. She looks around, her luck. She found none to be.

"Hurray! There it is", she screamed. She runs in the direction of the wind. Her run comes to an end. She tries to detach the dress from a tree. Besides her dress, there was an injured peacock. She took it out. She took the wounded bird home and gave it food, water, care, and shelter. Days pass by, Reema makes memories with the peacock.

One cold winter afternoon, a couple comes looking for their peacock in Reema's house. Reema replies, "This peacock is mine now. I have taken care of it with the most care I could provide. I won't let you take it. By the way, why do you need it?" The couple tells her if the foot of a peacock has medicinal properties. Thus, they can get rich. Reema tells them I won't give it to you for chopping it down for your use. Reema starts arguing with them. Her mother arrives and asks what happened? Reema replies that they want our peacock for cutting it down.

They go to the Panch with their quarrel. The Panch calls a meeting. The verdict is announced. The custody was given to Reema and her mother. The poor couple gets punished. They forgot everything & lived happily ever after.

SOME QUESTIONS TO LIFE (MOROCCO COMPETITION)

A. What is your opinion about playing sport?

In my opinion, playing sports is a great way to pass your time and increase your strength. I think a game is necessary for good health. As far, I am concerned outdoor sports should be a part of everyone's daily routine. I would say that the vaccine for thigh pain, knee pain, or any other kind of pain is sports.

B. What is your advice for someone who wants to stop smoking cigarettes?

I advise you to have Nicotex. One must distract their mind whenever they feel to have one. You had ought to consult an expert. If I were you, I would have tried to reduce the number of cigarettes every day. I don't think you shouldn't buy one. Focus on the side effects of having cigarettes. Think of your close relatives who will suffer because of your smoking.

C. Do you agree or disagree with the idea of obliging people by law to recycle their garbage at home?

I agree with the idea of obliging people by law by law to recycle their garbage at home. But one should be careful while segregating the trash at home from 1 dustbin cleanliness and healthiness must be kept in check. What I exactly think is that different kinds of litter must be kept in separate bins. There should be at least two different bins at one's house 'moist and dry waste.'

D. What is your suggestion for developing your own country or city?

You had better have a good government, good water, electricity, and daily needs supply. You ought to have stable and clean roads. I will advise you to plant a lot of trees. I recommend you have a city with all the above-given facilities. I suggest that you must be sure you have the correct information of every traveller.

WORKING ON 2 TOPICS :- MY FAVORITE HOBBY AND ANIMAL

Hobbies

Mandala Arts

- It helps me put down my emotions on a piece of paper.
- Due to mandalas, I can write for a longer time.
- Giving it time twice or thrice a week gives me good practice and makes me an expert.

I did my first mandala in my Grade 6 Summer Vacations. My first drawing was a small and simple one. When I started enjoying it, I made bigger ones. I was appreciated for my arts whenever I got a chance to show some. The positive feedback motivates me to continue my mandala art skills.

Animals

Description

1. Dogs have many breeds. My favorite breed is Pomeranian.
2. Dogs are very loyal and are considered the Man's best friend.
3. Dogs are playful as well as securable. They sense danger in seconds.

Feeding

1. Dogs feed Pedigree(dog food brand).
2. Dogs can also eat pumpkins, boiled eggs, etc.

Living

1. On average, dogs live up to 10-13 years. Pomeranians live up to 12-16 years.
2. Dogs live in their owner's house, dog shelters, etc.

DESCRIBE A PLACE YOU LOVED AS A CHILD.

As a child, I used to love swimming on water bodies like beaches, ponds, etc. So my first favourite water body is Gopalpur Beach. This beach is a Notified Area Council and a coastal town of the Ganjam district in Odisha.

Here is the address of Gopal Beach if anyone wants to visit, Gopalpur, Berhampur, Ganjam district, Odisha-760002

Now let's talk about Gopalpur Beach.

I had visited Gopalpur beach on March 10th, 2018. For our safety, govt of Odisha allocated a few police force to take care of visitors. The reason was the ocean has tidal waves which can pull anyone into it. Thereby it causes the death of an individual.

I never knew that beach water is salty when I tasted it for the first time. It has a very cooling and relaxing atmosphere. It has big stairs for sitting. It also has Food Courts, toy shops, stationery shops, etc. There were camel and horse rides too. If you climbed up the stair, you could find a small aquarium which was nice to watch out for. There were many kinds of fish in it.

If you visit Odisha, you should also visit the beach. It is one of my favourite places, that can be yours too.

A DAY OF LOST IN A JUNGLE

I and my friends were lost, in a jungle where we recently went for our vacations. It was a hot summer day.

It followed so, the early morning of the day for planning our trip to a jungle. I woke up and freshened myself up. I was as fresh as a flower sprinkled with water! I stayed excited as from today we were having our vacations. We had a call and discussed a place for visiting. After quarrels, we finally got a destination at The Bandipur Safari Lounge.

We packed up things we needed. We rode our vehicle to our preferred destination.

We had enough food to survive for a day in the jungle. But who knew that it would be less than ever. Have you ever heard that a person eats even more than needed when a person is worried? If not, open up your ears that's right! We were so tense, so maybe you can imagine how much we ate!

Through the walkie-talkie, our group called the rescue team.
